SUMMARY

Full-stack developer with 8+ years of experience building web applications with PHP (Laravel, CodeIgniter, Yii2) and JavaScript (Vue, React). Built automation bots and bank integration services for Flip, spent 4+ years on Niagahoster's hosting platform, and ships products end to end, including AI features.

SKILLS

Programming	PHP, JavaScript, TypeScript, Go, SQL, HTML, CSS, Shell
Backend	Laravel, Livewire, CodeIgniter 4, Yii2, Go Fiber, Node.js, REST APIs, OpenAPI / Swagger
Frontend	Vue 3, Nuxt, Pinia, React, Next.js, Ember.js, Tailwind CSS, Bootstrap, jQuery, PWA
Data & messaging	MySQL, PostgreSQL, MariaDB, Redis, Memcached, Elasticsearch, RabbitMQ, Google Pub/Sub
DevOps & cloud	Docker, Git, GitHub Actions, Jenkins, Kibana, Alibaba Cloud, Linux servers
Testing	Pest, PHPUnit, Vitest, Playwright
AI	LLM APIs (OpenAI, Anthropic, Google Gemini, OpenRouter), structured output, vision
Spoken languages	Indonesian (native), English (conversational)

EDUCATION

Bachelor's Degree in Informatics Engineering (Teknik Informatika) · UIN Malang — 2013 – 2018

EXPERIENCE

Full-Stack Developer · Integra Teknologi Solusi — Sep 2025 – Present
Surabaya, Indonesia

- Built a URL-shortener module with CodeIgniter 4 and PostgreSQL.
- Migrated a legacy database to a new schema and fixed data and application issues after the migration.
- Develop new backend endpoints and improve existing features while keeping the application stable for daily use.

Freelance Full-Stack Developer · Self-employed — 2024 – Present
Remote · project-based, alongside and between full-time roles

- Designed, built and deployed eco-commerce.id as the sole developer, and build features on call for returning clients such as e-ujian.id (see Projects).

Full-Stack Developer (Contract) · Skyshi Digital Indonesia, placed at Flip — Sep 2024 – Mar 2025
Jakarta, Indonesia · Flip is an Indonesian fintech for transfers and payments

- Built browser-automation bots that collect bank statements from multiple Indonesian banks and upload them into Flip's system (JavaScript, Shell).
- Developed Go services: INT Parsing Service, which parses bank-statement CSV files for reconciliation, and BNI Adapter, which connects Flip with Bank BNI's API.
- Developed features in Flip Server, the core backend (Yii2, MySQL, Redis, Docker), and in Bangkokok, the internal dashboard staff use to manage transactions (Next.js).

Full-Stack Developer · Ivoji — Jun 2024 – Sep 2024
Jakarta, Indonesia

- Developed features for a Laravel + Vue.js PWA that also served as the company's mobile app and for its admin system, and maintained the infrastructure on Alibaba Cloud.

Full-Stack Developer (Contract, project-based) · Oceanhoster — Sep 2023 – Jan 2024
Yogyakarta, Indonesia

- Revamped the customer client area and built new features under per-feature contracts, optimized for performance and responsiveness.

Full-Stack Developer · Niagahoster Mar 2019 – Aug 2023

Yogyakarta, Indonesia · Indonesian web hosting provider, now rebranded as Hostinger

- Built and maintained the landing pages and order flow customers use to buy hosting products.
- Developed the BoxBilling admin and client areas, and Niagahoster Partner with its WordPress plugin.
- Worked on internal services for domain and VPS products (cApi, hDomain, hVps), including REST APIs and third-party integrations, and connected Niagahoster's systems with Hostinger's.
- Named Best Team Member of Engineering twice (Q3 2020, Q2 2022).

Web Developer · PT Spora Optima Global Feb 2018 – Jan 2019

Malang, Indonesia

- Designed, built and maintained websites, including performance tuning and bug fixes.

PROJECTS

eco-commerce.id · Eco-Commerce Rejoagung Jul 2026 – Present

Freelance · sole developer · Laravel 13, Vue 3, TypeScript, MySQL

Multi-vendor marketplace where Rejoagung village community groups sell produce and recycled crafts.

- Designed the REST API with a controller → service → repository architecture, per-group roles and permissions (Spatie Permission with teams), token auth (Sanctum) and OpenAPI docs.
- Built ordering with QRIS, bank transfer or cash; delivery or pickup with distance-based shipping on a map; PDF invoices; recurring product subscriptions; and scheduled reminders by email and web push.
- Built circular-economy tracking from waste deposit to compost to harvest, with printable QR codes on packaging that show where a product came from.
- Built the Vue 3 + TypeScript SPA (Vite, Pinia, Tailwind CSS) as an installable PWA with admin and seller dashboards; wrote 800+ automated tests (Pest, Vitest, Playwright) running in GitHub Actions CI.

CatatDuit · Personal and household finance app Aug 2026 – Present

Personal project · in development · Laravel 13, Livewire 4, MySQL, Redis, Docker

Finance PWA for individuals and households: accounts, budgets, bill reminders and monthly reports.

- Built an AI assistant that turns typed or spoken sentences and receipt photos into transactions, with a confirmation step before anything is saved.
- Designed a provider-agnostic LLM layer with adapters for OpenAI, Anthropic, Google Gemini, OpenRouter and any OpenAI-compatible API, with encrypted keys, key rotation with failover and usage quotas.
- 700+ PHPUnit tests, PHPStan level 7 and CI on GitHub Actions.

Narrvio · Social media monitoring dashboard Apr 2026 – Aug 2026

Team prototype · Laravel, Vue 3, PostgreSQL, Docker

Tracks public sentiment across Indonesia from Facebook, Instagram, TikTok and X. Teammates collect the data and load it into PostgreSQL.

- Built the dashboard (Vue 3, Chart.js, Leaflet): sentiment by platform, trends, a province map, word clouds, keyword filters and Excel export.
- Built the Laravel API with SQL-side aggregation and pagination; deployed both to a VPS (Docker, Nginx).

e-ujian.id · Online exam platform 2024 – Present

Freelance · CodeIgniter, Go (Fiber), Redis · used by schools across Indonesia

- Integrated Google Gemini so teachers can generate learning materials, question banks and student assignments.
- Built features in the Go (Fiber) student app: exams through Google Forms, e-learning materials, assignments and practice, dynamic menus, and exam re-entry limits with access tracking.
- Built a public question bank other schools can clone, civil-service (CPNS) exam types, per-school backgrounds and better reports; implemented Redis for exams; built e-absensi, a Laravel attendance app.

More freelance work

Point.RED (delivery-note feature, Vue.js + Laravel microservices), **Ratson Inventory** (Laravel, 2024), **client.morclinic.id** (referral feature), a job portal and WordPress sites. Full list with screenshots at anasabdur.com.
